Evaluation Methods Used:

The evaluation was conducted in the following environments:

- Windows 10: IE/JAWS/Dragon, Chrome/JAWS/Dragon, Firefox/NVDA/Dragon

- Mac: Safari/Voiceover
- Mobile: iOS 14.4.1/Safari/VoiceOver, Android 9/Chrome/TalkBack

The accessibility assessment was conducted according to the following steps:

- I. An accessibility expert conducted an overall technical analysis in order to identify issues of technical compliance that would affect mobility impaired, deaf/hearing impaired, and low vision users. The evaluator inspected each screen using Google Chrome and Mozilla Firefox browsers with the Wave and aXe toolbars. Code analysis was conducted using browser Developer Tools. Additional analysis was conducted using Internet Explorer and Safari. Mobile pages were examined using Mobile Safari, and Android Chrome browsers, as well as responsive view in Chrome.
- II. Keyboard accessibility analysis (for mobility and physically impaired users) was conducted by attempting to thoroughly navigate the website through the keyboard, without using a mouse, using Google Chrome, Mozilla Firefox, Internet Explorer and Safari browsers. Mobile testing was conducted using a Bluetooth keyboard with iPhone and Android devices.
- III. Speech access analysis (for mobility and physically impaired users) was conducted using Dragon Individual Professional using Google Chrome, Mozilla Firefox, and Internet Explorer browsers.
- IV. For deaf and hard of hearing users, any audio content was assessed for proper captioning.
- V. The accessibility for low vision users was evaluated three ways: (1) using the screen magnification, palette, and contrast controls provided by the operating systems; (2) using the font resizing capability offered by the browser, and (3) using Color Contrast Analyzer version 2.2.
- VI. An evaluator who is legally blind conducted the screen reader testing. The goal was to identify accessibility barriers that are likely to be experienced by users who are blind. The evaluator worked through the website using the JAWS for Windows (v. 2021) screen reader with Google Chrome and Internet Explorer browsers, NVDA (v. 2020.4) screen reader with Mozilla Firefox browser, and VoiceOver screen reader with Safari browser. Mobile testing was conducted using VoiceOver with Safari on iOS and TalkBack with Chrome on Android. Any pages found to have screen reader issues were re-examined in interactive sessions with a sighted evaluator.

VII. Any usability issues for users with disabilities encountered during the accessibility assessments in the above Steps were noted for subsequent mention.
